MEMORANDUM FOR: Commander
1127th USAF Field Activities Group
Ft. Belvoir, Va.

Attention: Lt. Col. Thomas Flashburn
Exclusive For AFCIN-IE-OS-NRF

SUBJECT : Incinerator

1. Colonel George R. Weinbrenner, the Air Attache to Prague, Czechoslovakia, was briefed by this Agency on the latest development of air fed incinerators for file destruction during a mid-tour visit to Washington in June of 1960. Photo copies and details of Models 1 and 2 were furnished, the latter unit in the prototype stage at that time.

2. The Colonel expressed a desire for the Model 2 unit. At that time the power requirements were 220 volt - 50/60 cycle current and he was of the opinion that most of the equipment at the Embassy utilized 110 volt - 50 cycle current.

3. This is to advise that a Model 2 unit with 110 - 50/60 cycle current has been developed and is now available and can be furnished under the terms discussed with Col. Weinbrenner if the requirement still exists and a request is submitted. A unit utilizing 220 volt - 50/60 cycle current is also available if such current is available.
